

DYNAMIC CORPORATE TRANSFORMATION

A strategy-execution platform for the whole transformation loop.

AXIOM diagnoses what is true today, decides where the company should go, drives execution through owned objectives and projects, and monitors whether value actually lands. Advanced analytics do the heavy work — and every figure stays traceable to the cell it came from.

THE LOOP — FOUR MOVEMENTS, ONE SYSTEM

01 · DIAGNOSE

What is true today

Enterprise and equity value on four independent lenses, a full ratio and performance library, financial health and risk grade, and a collaborative assessment of organisational effectiveness scored by your own people.

02 · DECIDE

Where to go next

Objectives and key results with named owners, your plan measured against five forecasting methods, your executives' stated priorities tested against what the analysis sees, and the moves that create most value, ranked.

03 · EXECUTE

Make it happen

Initiatives and projects typed, prioritised and assigned — with named accountability, milestones, action items and a schedule that draws itself, each traceable back to the objective it serves.

04 · MONITOR

Watch it land

KPIs against plan and target, milestone and action completion, transformation readiness derived from assessment evidence, and the gap between intent and outcome quantified line by line, year by year.

WHAT MAKES IT DIFFERENT

Your people, inside the analysis

- Collaborative assessment across 13 categories and 78 practices, or 361 in deep-dive mode
- Design your own instrument — choose the practices that count, weight the categories, add questions of your own
- Anonymity protected by a strict minimum-respondent floor, enforced on combined slices too
- Results sliced by department and seniority — see where leadership and the layer below disagree
- An Innovation Hub routing ideas from anyone into the same decision queue as analytics-derived proposals

Intent versus evidence

- Upload your own multi-year plan alongside your actuals; AXIOM never overwrites it
- Five independent forecasting methods, each explained with the parameters actually used
- Long-run variance: which line diverges, by how much, cumulatively, and the year the gap opens
- Executive priorities recorded and tested against the risks the analysis flags
- Your plan, your extended plan, and AXIOM's forecast valued as three separate numbers

Nothing is a black box

- One definition per number — ROIC, WACC, net debt and EVA computed once and consumed everywhere
- Missing data is shown as missing, never quietly filled in as zero
- Every score shows the inputs, weights and formula that produced it
- Every proposal cites the document and page it was drawn from
- Enterprise-to-equity bridge rendered line by line, auditable on screen

FROM DATA TO DECISION

01 · INTAKE

Structured upload

Statements, plan, organisation, objectives, KPIs — one guided template, validated on entry.

02 · CALIBRATE

Your numbers, computed

Live statements, ratios, valuation, risk and forecasts computed on your data within minutes.

03 · ASSESS

People contribute

Invited assessors score practices and submit ideas — private links, no accounts needed.

04 · DECIDE

Judge proposals

Documents, assessment, and your people feed one queue; executives adopt or dismiss.

05 · TRACK

Execute & re-run

Owned projects, quarterly refresh, and the loop begins again with new evidence.

BENEFITS BY ROLE

What each seat at the table *actually gets*.

Chief Executive

- One view of strategy, execution and value creation
- Objectives owned by named executives, not committees
- Where the organisation quietly disagrees with leadership
- Whether your stated priorities match the risks the analysis flags
- Ideas from every level, routed into real decisions
- Board-ready reporting generated on demand

Chief Financial Officer

- A full ratio library — margins, returns, leverage, liquidity, cash conversion — plus the ratios your industry tracks
- ROIC against WACC, and economic value added stated in currency
- Enterprise and equity value on four independent lenses
- Plan versus forecast divergence, quantified per line and per year
- Distress screens shown beside AXIOM's own solvency read
- Every number auditable back to the cell it came from

Operating Leadership

- Departmental objectives, key results and KPIs in one map
- Initiatives with named accountability, milestones and action items
- A schedule that draws itself, and a cockpit showing what is late, blocked or unowned
- Risk and readiness by function, not only in aggregate
- Evidence for what to fix first, and what it is worth
- A channel for the people closest to the work

Board & Advisers

- Read-only seats with page-level access control
- Valuation, ratios and risk on one auditable page
- The formula and the source behind every figure
- Plan attainment probability, not plan commentary
- A pack refreshed each quarter rather than rebuilt each quarter
- Secure-link sharing without granting workspace access

THE PLATFORM AT A GLANCE

Diagnose

- Headline ratio set — margins, returns, leverage, liquidity, cash conversion
- Client-defined ratios with your own definitions and formulas
- Common-size income statement and balance sheet
- ROIC versus WACC, and economic value added
- Enterprise valuation — DCF, simulation, real options
- Market comparables with an editable multiple
- Full statements with probability bands
- Risk grade, distance to default, published distress screens
- Enterprise health — value captured versus achievable
- Collaborative assessment and effectiveness index
- SWOT derived from evidence, not opinion
- Industry, macro and custom-peer benchmarking

Strategise

- Objectives and key results with owners and horizons
- Organisational structure and departmental accountability
- Your plan versus five forecasting methods
- Long-run variance and one-year gap analysis
- Executive priorities registry with alignment analytics
- Enterprise optimisation across five value levers
- Scenario analysis and target-state planning
- Real-options and flexibility valuation
- Executive brief with ranked recommendations
- Document intelligence with cited proposals

Execute

- Initiatives and projects typed, owned, prioritised
- Named accountability on every initiative
- Milestones with acceptance criteria and evidenced sign-off
- Action items with owners, dates and dependencies
- Automatic Gantt drawn from the work itself
- Project monitoring cockpit for executives and the board
- Proposals from documents, assessment and people
- Innovation Hub for ideas at every level
- KPI plan versus actual with variance and status
- Transformation readiness from assessment evidence
- Full drill-down and drill-up across every entity
- Configurable page-level access control

DESIGNED FOR HOW COMPANIES ACTUALLY WORK

Few deciders, many contributors

Strategy, valuation and objectives stay with a handful of named executives. Assessors contribute feedback and ideas through a private link and never receive access to the strategic surface. Access is configurable by the administrator, page by page, so the circle of trust matches your organisation rather than a vendor's tier structure.

Works with any system you already run

A defined data contract means AXIOM ingests from any ERP or accounting platform through a structured template or API — no integration project before you see value. Re-upload each quarter and the model refreshes; changes made inside AXIOM are never silently overwritten by an upload, and conflicts are surfaced for a human to resolve.

FEATURE INVENTORY · 1 OF 5

Diagnose — *the financial picture.*

Every capability listed is live in the platform. The benefit line states what it changes for the organisation, not what it does technically.

Financial performance and ratio intelligence

The questions a CFO is asked in every meeting — answered on your own numbers, with the formula attached.

CAPABILITY	WHAT IT GIVES YOU
Headline ratio set	Thirteen ratios on one screen: gross, EBITDA, operating and net margin; ROIC, return on equity and return on assets; net debt to EBITDA, debt to equity and interest coverage; current ratio; free-cash-flow conversion; and the ROIC-versus-WACC spread.
One definition per number	ROIC, WACC, net debt and economic value added are computed in exactly one place and consumed by every other page. Valuation, risk grade and the ratio panel cannot disagree about your leverage.
Ratio explainer	Each ratio opens to its definition, its formula, this period's numerator and denominator as actual numbers, and the statement lines those numbers came from.
Economic value added	The spread between return on invested capital and cost of capital, applied to the capital employed and stated in currency: value created or destroyed this period, not a ratio to interpret.
Common-size statements	Every income statement line as a percentage of revenue and every balance sheet line as a percentage of total assets, across all periods, so cost drift is visible before it reaches the bottom line.
Growth on a stated basis	Year-on-year as the headline, period-on-period available, and compound growth across the full span shown separately with the span named — no ambiguous single "growth rate".
Your own ratios	Add the ratios your industry actually tracks, with your definition and your formula, composed from your own statement lines. Your library travels with your account across every company you run on AXIOM.
Your own inputs	Declare metrics no accounting template collects — recurring revenue, occupancy, tonnes shipped, billable utilisation — enter them per period, and build ratios on them.
Missing is missing	A ratio without its inputs is never printed as zero. What cannot be computed is listed once, with the data it would need, rather than shown as a page of blanks.
Historical and forecast, marked	The last actual period is marked on every chart, and any ratio computed on forecast periods is labelled as projection rather than presented as fact.

Organisational benefit: the finance team stops rebuilding the ratio pack in a spreadsheet every quarter — and stops arbitrating between two versions of ROIC that came from two different files.

Enterprise valuation

What the business is worth — four independent lenses, auditable line by line.

CAPABILITY	WHAT IT GIVES YOU
Intrinsic DCF	Enterprise and equity value from your own free cash flows, discounted at a cost of capital derived from your actual capital structure, size and specific risk premia.
Simulated distribution	Thousands of simulated paths produce a full probability distribution of enterprise value — downside, median and upside — rather than a single point estimate.
Real options valuation	The value of strategic flexibility priced explicitly: expansion, deferral and abandonment options, and the flexibility premium over static value.
Market comparables	EV/EBITDA valuation on trailing earnings with a multiple you control, presented at conservative, base and strong cases, with the divergence from intrinsic value stated.
EV to equity bridge	Debt, cash, preferred equity and minority interest walked line by line on screen as separate signed items; the ownership-interest discount shown separately, never folded into the reconciliation.
Stress and sensitivity	How value responds to cost-of-capital, terminal growth and margin shocks — and which single assumption moves the answer most.
Three valuation bases	Value your own plan, your plan extended by an AXIOM method, or AXIOM's independent forecast — each labelled, each distinct, never blended.

Organisational benefit: valuation stops being an annual exercise performed by outsiders. Management, the board and advisers argue from the same auditable number — and can see immediately which assumption they actually disagree about.

Diagnose — *the organisation, and the risk.*

Collaborative assessment

What the organisation knows about itself — collected safely, turned into evidence.

CAPABILITY	WHAT IT GIVES YOU
13 categories, 78 practices	A structured diagnostic of organisational effectiveness spanning strategy, operations, people, technology, risk and more, with an optional 361-practice deep dive.
Survey designer	Build the instrument your business needs: choose which practices count, add your own categories and questions, weight the categories to your priorities, and preview before you send.
Private-link participation	Assessors respond without accounts or passwords; answers save as they go and can be revised at any point until the cycle closes.
Anonymity floor	No result is displayed for any group below the minimum respondent threshold — enforced on combined slices, so a small intersection cannot expose an individual.
Department and seniority slices	See where functions and management layers diverge; the gap between executive and mid-level perception is itself the most useful finding.
Abstention handling	"Not able to assess" is recorded as a distinct answer; high abstention on a practice signals invisibility, not missing data.
Effectiveness index and trend	One comparable score per cycle with per-practice dispersion, so you see not only the average but where opinion splits sharply.
Participation management	Invite, remind, revoke and re-invite; track invited, in-progress and submitted; reclaim a seat when someone leaves the firm.
Innovation Hub	Anyone invited can submit an idea, named or anonymous. Ideas reach leadership as a departmental picture, never as individual tracking, and enter the same review queue as every other proposal.

Organisational benefit: leadership hears what the organisation actually thinks — protected by anonymity, structured enough to compare across departments and over time, and wired directly into the initiatives that follow.

Risk, health and benchmarking

Where the firm is exposed, how it compares, and what would have to go wrong.

CAPABILITY	WHAT IT GIVES YOU
Risk grade and indicator bands	Interest coverage, current ratio, cash-flow margin, leverage and ROIC versus cost of capital graded against published thresholds, with an overall letter grade.
Distance to default	Solvency headroom expressed in standard deviations, with the probability of enterprise value falling below debt, and of cash going negative under recession conditions.
Published distress screens	Altman Z, Z' and Z'', Springate and Zmijewski — each labelled as a screen, each stating the population it was originally fitted on, so a score is never mistaken for a verdict.
Independent second opinion	Those screens sit beside AXIOM's own solvency read rather than feeding it. Where the two agree, that is corroboration for the board; where they diverge, the divergence is the finding.
The failure boundary	Rather than asking whether the plan looks safe, AXIOM solves for the conditions in growth, margin and financing under which solvency breaks — and reports how far today's position sits from that edge.
Enterprise health index	How much of your achievable enterprise value you currently capture, and the capital-structure gap between where you are and the point that minimises your cost of capital.
Evidence-derived SWOT	Strengths, weaknesses, opportunities and threats drawn from assessment scores, financial signals and cited documents — each traceable to its source. Where the evidence does not support a claim, no claim is made.
Benchmarking and context	Performance against sector peers on a composite index, with a custom peer set where the standard classification does not fit, and your own market and macro assumptions carried into the comparison.

Organisational benefit: risk becomes a management conversation rather than a compliance exercise — quantified, comparable, and tied directly to the decisions that would reduce it.

Decide — *where to go next.*

Planning and forecasting

Management intent held separately from evidence — and the distance between them measured.

CAPABILITY	WHAT IT GIVES YOU
Your plan, preserved	Upload a five- or ten-year plan alongside your actuals. AXIOM stores it as management intent and never overwrites it with its own projection.
Five forecasting methods	Trend extrapolation, driver-based build-up, damped smoothing, simulation, and a back-tested weighted ensemble — each with its parameters exposed.
Method explainers	Every method opens to a full explanation: estimator, inputs, assumptions, when it is reliable and when it is not, and the exact parameters used on your data.
Plan extension	Continue your own plan beyond its final supplied year using any method, anchored on your trajectory rather than reverting to history — and clearly marked as projection.
Long-run variance analysis	Line by line and year by year: absolute and percentage divergence, cumulative five- and ten-year gap, compound growth spread, and the year the gap first opens materially.
Gap and variance analysis	Plan against actual against forecast on the same axis, per line and per period, with favourable and unfavourable variance separated and full-year attainment projected.
Full statements with bands	Income statement, balance sheet, cash flow and comprehensive income, each line carrying its probability band alongside the plan figure.
Plan attainment probability	The odds of hitting revenue, margin and cash-flow targets individually — and the far lower probability of hitting all of them together.
Export to your own model	Variance and ratio tables export to CSV so the analysis lands in your board pack rather than staying trapped in a tool.

Organisational benefit: the board conversation moves from “is the plan ambitious?” to “the plan implies this much more revenue than the evidence supports, concentrated in these years, on these lines.” Optimism becomes quantified rather than debated.

Priorities, optimisation and recommendations

What leadership says matters, what the analysis says matters, and the distance between the two.

CAPABILITY	WHAT IT GIVES YOU
Executive priorities registry	Each executive records their priorities for the cycle, in their own words, against the function they own — a durable record rather than a slide from an offsite.
Alignment analytics	Where stated priorities map to live objectives, where two executives are pulling in different directions, and — most usefully — where a risk the analysis flags has nobody's name against it.
Enterprise optimisation	Five value levers searched jointly for the value-maximising combination, with each lever's contribution quantified and the upside over today's plan stated.
Scenario analysis	Test a strategic move against the base plan and watch the whole distribution of outcomes reshape, not just the midpoint.
Real-options and flexibility	The value of being able to wait, expand or withdraw, priced against the underlying distribution rather than asserted in a footnote.
Executive brief	A ranked, evidence-backed set of recommendations with expected value impact, refreshed as the underlying data changes.
Document intelligence	Strategy documents, annual reports and board papers analysed into candidate proposals, each citing the document and page it was drawn from.
One decision queue	Proposals from your documents, your assessment and your people arrive in a single inbox with adopt, dismiss and reconsider — one review ritual, three sources.

Organisational benefit: the gap between what leadership says is important and what the evidence says is urgent stops being a matter of opinion — and becomes a short, specific list that can be closed.

FEATURE INVENTORY · IV OF V

Execute — *the accountability layer.*

Objectives, structure and accountability

Strategy connected to the people accountable for delivering it.

CAPABILITY	WHAT IT GIVES YOU
Objectives and key results	Qualitative objectives with measurable key results, each carrying an owner, horizon, priority, status and computed progress from baseline to target.
Organisational structure	Departments, heads and reporting lines rendered as a live org chart; every node opens to that function's objectives, key results, KPIs and projects.
Departmental accountability	Every objective, KPI and project attributed to a function and its head, and every performance surface sliceable to a single department.
In-app creation	Executives create objectives, key results and KPIs directly, without waiting for the next upload cycle — and those additions survive every subsequent upload.
Non-destructive reconciliation	Work created in the platform is never deleted by a later upload; rows that disappear from a template are flagged for review, and genuine collisions are surfaced for a human to resolve.
Full traceability	Drill from a department to an objective to a key result to the KPI it moves — and back up again from anywhere. No page is a dead end.

Initiative and project execution

The layer where strategy usually fails — made explicit, owned and visible.

CAPABILITY	WHAT IT GIVES YOU
Initiatives and projects	Typed as open-ended initiatives with a review cadence or dated projects with a deadline; prioritised, assigned, and linked to the objectives they serve and the evidence that raised them.
Named accountability	Responsible, accountable, consulted and informed recorded on every initiative — so accountability is a record that can be reviewed, not an assumption that can be disputed.
Milestones with acceptance criteria	Each milestone carries the performance requirement it must meet and the achievement recorded against it, so “complete” is evidenced rather than declared.
Action items	Owner, due date, status and dependency, rolling up to the milestone and the initiative above them — the working layer beneath the strategy layer.
Automatic Gantt	The schedule draws itself from the milestones and action items already recorded. No separate plan to maintain, and no second version to reconcile.
Blockers, raised and visible	An impediment recorded against an action item surfaces on the initiative, the department and the objective above it, rather than waiting for a status meeting.
Derived completion	Percentage complete computed from what has actually been signed off against its criteria, not from what was self-reported in a column.
Project monitoring cockpit	A read-only portfolio view for executives, sponsors and the board: what is on track, late, blocked or unowned, across every initiative, sliceable by function.

Organisational benefit: nothing is orphaned. Objectives with no project are visible; projects serving no objective are visible; work with no owner is visible — and every executive can see exactly what their function owns and how it is progressing.

FEATURE INVENTORY · V OF V

Monitor — *whether value lands.*

Measurement and readiness

Not activity reported, but outcome measured.

CAPABILITY	WHAT IT GIVES YOU
KPI plan versus actual	Year-to-date variance against plan and full-year target, favourable or unfavourable, sliceable by function and drillable to the objectives that target it.
Ratio and margin tracking	The headline ratio set carried through every period, historical and forecast, so a margin drifting three quarters before it hits profit is visible when it starts.
Transformation readiness	Six dimensions — leadership, strategic alignment, operational flexibility, innovation, governance and execution — derived from assessment evidence, with the weights shown.
Stakeholder engagement	Participation and response tracking across the assessment cycle, so a low score from four people is never mistaken for the view of forty.
Quarterly re-run	Re-upload, and every surface refreshes against the new period while the previous cycle stays intact for comparison. The loop begins again with new evidence.
Full drill-down and drill-up	From the enterprise number to the department to the objective to the action item — and back — without losing your place.

Reporting, access and administration

Who sees what, and what leaves the building.

CAPABILITY	WHAT IT GIVES YOU
Board reporting on demand	Diagnostic, valuation and performance reports generated as PDF or presentation, fully traceable to their inputs, shareable by secure link.
Configurable page-level access	The administrator decides who sees which pages: strategy for a few, contribution open to many — enforced at the server rather than merely hidden in the interface.
Versioned uploads	Every upload is versioned and retained, and the original file remains downloadable. You can always show where a number came from, months later.
Multi-company accounts	One account can carry many companies — a holding structure, a portfolio, or a consulting practice's clients — each with its own model, cycle and access list.
Web and mobile	Full workspace on the web; leadership review and feedback on iOS and Android with the same credentials.

Organisational benefit: the transformation stops being a document and becomes a running system — refreshed each quarter, owned by named people, and measured against the value it was supposed to create.

A QUARTER, END TO END

WEEKS 1-2 Refresh Upload the closed quarter. Statements, ratios, valuation and risk recompute; variance against plan is available the same day.	WEEKS 3-5 Assess The assessment cycle runs on private links. Ideas arrive through the Innovation Hub alongside it.	WEEK 6 Decide One queue of proposals reviewed in one sitting. Adopted items become initiatives with owners and dates.	WEEKS 7-13 Execute Action items, milestones and the cockpit carry the work. The board pack generates itself from what actually happened.
---	--	---	--

CONFIDENCE, NOT CREDULITY

Advanced analytics, *stated in the open.*

AXIOM is not a dashboard over your data — and it is not a black box either. These are the disciplines that let a CFO put its output in front of a board and defend it under questioning.

GOVERNANCE OF FIGURES

One definition per number

ROIC, cost of capital, net debt and economic value added are computed in exactly one place and consumed everywhere else. An automated check runs on every release and fails it if a second copy of any of those calculations appears anywhere in the platform. Two pages cannot quietly disagree about your leverage.

TREATMENT OF GAPS

Missing is never zero

Where an input is absent, AXIOM shows nothing and names the data it would need. No figure is inferred, defaulted or filled in from silence — because a fabricated zero in a board pack is worse than an honest blank, and it is the failure mode that quietly discredits analytics tools.

VALUATION

Cash flow, stress-tested against distributions

Free cash flow to firm and to equity kept distinct and never substituted. Cost of capital built from unlevered beta, size and specific premia with a distress-adjusted cost of debt. Downside cases drawn from worst-case distributions within an uncertainty set, rather than an arbitrary percentage haircut.

FORECASTING

Five methods, and a stated level of disagreement

Trend, driver-based, damped smoothing, simulation and an ensemble whose weights are set by back-tested accuracy rather than by preference. When the methods disagree, the spread is reported rather than averaged away — so you know when a forecast is worth arguing about.

OPTIMISATION

The best combination, found by search

Margin, working capital, capital intensity, growth and leverage searched jointly under solvency and feasibility constraints, returning the value-maximising combination and each lever's marginal contribution — a multi-variable problem no executive can solve by intuition.

VIABILITY

The conditions under which the plan fails

Rather than asking whether a plan looks safe, AXIOM solves for the boundary in growth, margin and financing space where solvency breaks — and reports the distance from today's position to that edge, monitored between cycles.

HONEST ASSESSMENT

Anonymity that survives arithmetic

Results are suppressed below a minimum respondent count, and suppression extends to complements — so no reader can deduce a small group's answers by subtracting one slice from another. Department and seniority intersections are protected independently.

DOCUMENT ANALYSIS

Cite or decline

Every proposal drawn from your documents carries the page it came from. Where the source does not support a claim, the system declines to make it — the discipline that separates analysis from generated plausibility.

REAL OPTIONS

Flexibility priced, not asserted

Expansion, deferral and abandonment valued against the underlying distribution, producing the flexibility premium over static value — the part of enterprise worth that a single-scenario spreadsheet structurally cannot see.

DATA INTEGRITY

Versioned and non-destructive

Every upload is versioned and retained and the original file stays downloadable. Work done inside AXIOM survives later uploads, and genuine conflicts are surfaced for a human to resolve rather than silently overwritten.

The question AXIOM answers that a spreadsheet cannot: not what the plan says, but whether the organisation can deliver it — and what it is worth if it does.

THE CUSTOMER JOURNEY

From free pilot to *full enterprise intelligence*.

Eight steps, one arc. You see a working model of your own company before you pay anything, and every step after that adds intelligence rather than obligation.

BEFORE YOU PAY ANYTHING

STEP 01

Free pilot sign-up

One call to agree which company we model and which cycle we run. No card, no commitment.

STEP 02

Submit your data

Financial and organisational templates — statements, plan, departments and reporting lines. We handle the loading.

STEP 03

Name your people

Who assesses, who decides, who reviews. Assessors need no account; they respond through a private link.

STEP 04

NDA & activation

We sign an NDA, load your data, and build the workspace. Your numbers, not a canned demo.

STEP 05

Your people assess

The assessment cycle runs. Answers are protected by a minimum-respondent floor — no individual is identifiable to anyone, including us.

STEP 06

Live walk-through

Valuation, assessment and recommendations, walked through with your leadership team on a call.

WHEN THE VALUE IS PROVEN

STEP 07

Purchase & transfer

Activation begins at **\$4,995 per company per month**. The workspace transfers to your administrator intact — data, history, assessment responses and all. Every purchase includes a complimentary 90-minute Activation Session with AXIOM's founder.

STEP 08

Deepen and extend

Design your own assessment instrument for any department. Add companies as your group grows. Upgrade to Prescience for the price difference — \$7,000 per company per month — for the forward engine, decision search and a named Client Success Manager.

ONE SUBSCRIPTION · ONE COMPANY · EVERYTHING INCLUDED

What one subscription covers

- **Unlimited users** — executives, project owners, everyone you invite to assess. Never counted, never charged
- A private workspace scoped to your account
- Your own companies, datasets and documents
- Full analysis, saved valuations and custom board reports
- AI document analysis with page-level citations
- Standard support

The analytical engine, in full

- Distributional geometry and catch-up odds between your plan and your reality
- What-if stress testing, covenant early warning and cash runway
- Target-state planning and market-multiple valuation
- Real-options valuation — the flexibility to expand, abandon or wait, priced on your own volatility
- Enterprise optimisation across five value levers

One journey, endless value. Discover what is true today, decide where to go next, and drive measurable change — with the same model carrying you from the first upload to the tenth quarter.

EDITIONS, PILOT, ADVISORY & PARTNERS

Start free. Scale when the value *is proven*.

The Free Pilot — we build it, you judge it

AXIOM's team sets up your company on the platform — your financials, your organisation, your assessment cycle, your reports — before you pay anything. Your executives review a working model of your own firm, not a canned demo, and nothing is watered down: the pilot runs the full engine, including Prescience. When you are ready the workspace transfers to you intact, and every purchase includes a complimentary 90-minute Activation Session with AXIOM's founder.

TWO EDITIONS • MONTHLY SUBSCRIPTION

AXIOM BUSINESS

\$4,995 / month

Save 17% on an annual contract

The complete diagnose–decide–execute–monitor platform for a single enterprise.

- **Unlimited users** — executives, project owners, everyone you invite to assess. Included, never counted
- **Ask AXIOM** — plain-language questions about your own data: statements, ratios, valuation, risk, assessment, objectives and initiatives. Answered with citations or an honest decline
- **Read-only access** for your board and advisers, scoped page by page
- All valuation, ratio, forecasting, OKR, execution and monitoring capability on pages 3–7
- Innovation Hub, document intelligence, board reporting
- Web and mobile access

AXIOM PRESCIENCE

\$11,995 / month

Save 17% on an annual contract

Everything in Business, plus the AI decision layer and a dedicated human one.

- **Ask AXIOM Forward** — everything Business answers about what *is*, plus what *could be*: scenario paths and forward recommendations
- **Decision search** — thousands of simulated strategy paths ranked by value and risk, recomputed nightly
- **Executive priorities alignment** — where leadership's stated priorities miss the risks the analysis sees
- **Dedicated Client Success Manager** — a named human accountable for your outcomes
- Priority support and quarterly model review

Already on Business? Upgrade to Prescience for \$7,000 / company / month, prorated to your renewal date — your term never restarts.

Annual contracts run twelve months and include two months free — \$49,950 and \$119,950 respectively, billed annually or quarterly. One company per workspace: running a group, a portfolio or a client book? Each company gets its own, and we will help you set it up. No per-seat charges, ever.

DCT ADVISORY

Founder-direct advisory — \$8,500 per 5-hour block

The software is the engine; advisory is the human interface. Work directly with AXIOM's founder — a career corporate-finance and transformation practitioner — on interpreting the analysis, pressure-testing the plan, and running the quarterly transformation rhythm. Purchased as blocks, not retainers: engage exactly when a cycle needs it.

PARTNER PROGRAM

Two ways to bring AXIOM to your clients

Refer — \$500 to join. Your client contracts with AXIOM directly: you earn ten per cent of their first-year subscription, they receive ten per cent off their first year.

Deliver — \$4,500, once your first client is live. Hold the account yourself — one workspace, your whole book, each client transferable to their own administrator whenever they are ready. Run their pilots, cycles and advisory under licence: **you keep 75% of what you bill.**

Strategy, execution and value — *in one running system.*

Start with the free pilot — we do the setup, your executives judge the result.
